INTERNAL

1.1 PURPOSE OF DOCUMENT

The purpose of this document is to define the functional, operational, and system requirements for the Trips Agent Platform to be deployed for the Nigerian market. The Trips Agent Platform is a B2B2C SaaS product that gives every travel agent, regardless of size, an all-in-one workspace to source flight tickets from different airlines from one interface, travel content, create packages for tours, visas and group tours, and instantly publish it as their own branded website. Their end customers browse and book directly from that agent-branded site, while the agent retains full control of pricing, margin, and the customer relationship.

This document defines the functional and non-functional requirements for the MVP of the Platform, covering agent onboarding, the branded website builder, product catalog management (tours, visas, group tours), booking and payments, CRM, and the retention and stickiness features (loyalty, sub-agent networks, analytics) that differentiate the Platform from a generic booking tool.

1.2 PROJECT SCOPE

The scope of the project consists:

- A Self-service agent registration, subscription tiers, and KYB/verification.
- Aggregated search and booking of flights via Trips APIs
- A no-code website builder that lets each agent publish a branded storefront (custom domain, logo, colors, content) within minutes.
- Design and create Tours & Packages, Visas, and Group Tours, including pricing, availability, and media.
- End-to-end reservation, booking, checkout, payment gateway
- Markup, commission and wallet
- CRM, notifications, reviews, loyalty
- Reporting, analytics, and an admin console for the Platform operator.
- Invoice generation

1.3 OUT OF SCOPE

- Aggregated search and booking of hotels, transfers and activities via Trips APIs
- Credit management

1.4 USER PERSONAS & STAKEHOLDERS

Persona	Description	Core Need
Independent Travel Agent (Primary)	Solo operator or 1-10 person agency; no website today; sells flights, hotels, visas, tours via WhatsApp/phone.	Wants a professional online presence and one place to search, quote, book and get paid, without hiring developers to build website
Agency Owner / Principal Agent	Runs a small agency with sub-agents or franchisees.	Needs to onboard sub-agents, set their markups/credit limits, and see consolidated performance across the network.
Sub-Agent / Agent Staff	Works under a principal agent's brand.	Needs a scoped login to search, quote and book within permissions set by the principal agent.
End Customer / Traveler	The agent's own client, browsing the agent's branded website.	Wants to see tours, visas and packages, get quotes, pay securely, and track bookings without knowing or caring what platform powers it.
Trips Admin	Trips Agent Platform's own operations team.	Needs to manage agent accounts, subscriptions, disputes, content moderation and platform-wide analytics.

1.5 Definitions, Acronyms & Abbreviations

Terms	Definition
Agent	A registered platform user who sells travel services under their own brand.
Principal Agent / Agency	An agent account that can create and manage sub-agents beneath it.
Sub-Agent	An agent operating under a principal agent's brand and permissions.
Storefront / Agent Site	The public, branded website generated by the Platform for a given agent.
White-Label	Content or a portal delivered under the reseller's brand with no visible reference to the underlying platform/supplier.
Markup	The margin an agent adds on top of the net rate.
Net Rate	The direct price charged to the agent by Trips before markup.
Wallet	A prepaid balance an agent or sub-agent uses to pay for bookings.

1.6 Product Overview & System Architecture

The Trips agent platform is a multi-tenant system. Each agent is a tenant with an isolated storefront, catalog, customer list and pricing rules. The high-level components are:

- Agent Console (web app): onboarding, bookings, catalog management, site builder, CRM, reports.
- Public Storefront Engine: renders each agent's branded site on a subdomain or custom domain from shared, configurable templates.
- Trips API Layer: a unified search/booking API abstraction over multiple third-party partners (flight/hotels aggregators, visa processors, local tour operators).
- Booking & Order Management Core: cart, checkout, booking lifecycle, cancellations, across all product types.
- Payments: gateway integrations, agent wallets, commission/markup calculation, payouts and reconciliation.
- CRM & Communications: customer records, quote/itinerary history, email notifications, invoice generation
- Admin Console — Trips-operator tools for agents management

2. Functional Requirements

2.1 User Account Management

UC - 1A: Login

Title		Login		
Description		This use case describes how a registered user (Agent, Sub-Agent, Staff) logs into the Platform.		
Actors		All Users		
Preconditions		User has an active, verified account.		
Postconditions		User is authenticated and directed to their role-appropriate dashboard (Agent Console, or Customer storefront account).		
Trigger		User navigates to the login page.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	User	Visits the login page		
RS - 2	System	Displays email and password fields, plus a "Forgot Password" button.		
RS - 3	User	Inputs credentials and submits.		
RS - 4	System	Validates credentials against the account record.	- Account locked after 5 consecutive failed attempts for 15 minutes. - Passwords are never stored or transmitted in plain text.	
RS-5	System	On success, creates a session and redirects to the correct dashboard based on the user's role.	Agent/Sub-Agent/Staff	
RS-6	System	On failure, displays an appropriate error without		Prevents account enumeration.

		revealing whether the email or password was incorrect.		
--	--	--	--	--

UC – 1B: Forgot Password

Title		Forgot Password		
Description		This use case describes how users recover a forgotten password.		
Actors		All Users		
Preconditions		User has been registered on the Platform.		
Postconditions		New password is updated to the one created by the user.		
Trigger		User clicks the "Forgot Password" button on the login page.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	User	Visits the login page.		
RS - 2	System	Displays login page with a "Forgot Password" button.		
RS - 3	User	Clicks "Forgot Password."		
RS - 4	User	Inputs email address.	A password-reset email notification is sent to the user.	
RS - 5	System	Validates the email address.	System returns a generic confirmation regardless of whether the account exists ("If an account exists for {{user email}}, you will receive password reset instructions"). For a valid, registered address, the system sends a time-limited reset link to the user's email.	Generic messaging prevents account enumeration.
RS - 6	User	Clicks the link in the email, inputs a new password, and confirms the password.		
RS - 7	System	Confirms the new password.	- System returns an appropriate error if the reset link has expired or the passwords entered do not match. - Reset link expires after 30 minutes or upon first use, whichever comes first. Password must meet minimum complexity rules (min. 8 characters, at least one number).	

RS - 8	System	Updates the password and logs the user in, or redirects to login with a success message.		
--------	--------	--	--	--

2.2 Agent Onboarding, Accounts & Subscription

UC – 1A: Agent Registration & KYB Verification

Title		Agent Registration & KYB Verification		
Description		This use case describes how a prospective travel agent registers on the Platform and is verified before going live.		
Actors		Prospective Agent, Trips Admin		
Preconditions		Agent has a valid business email/phone, and business registration documents		
Postconditions		Agent account is created and marked Verified or Pending Verification.		
Trigger		Prospective agent clicks "Sign up" on the website.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Submits business name, email/phone, country and password.		
RS - 2	System	Sends an OTP/verification link to confirm the email address.		
RS - 3	Agent	Confirms the OTP/link and proceeds to KYB.		
RS - 4	Agent	Uploads a business license/registration document	Accepted file types: PDF, JPG, PNG, max 10MB.	
RS - 5	System	Sets account status to "Pending Verification" and notifies Trips Admin.		
RS - 6	Trips Admin	Reviews the submitted document and approves or rejects.	Agent cannot fund wallet until verification is approved.	
RS - 7	System	Notifies the agent of approval (account becomes "Verified,") or rejection with reason.		

UC – 1B: Subscription Selection

Title		Subscription Selection		
Description		This use case describes how a newly verified agent selects a subscription plan and completes first-time setup.		
Actors		Agent		
Preconditions		Agent account is Verified.		
Postconditions		Agent has an active subscription, base currency/country/tax settings saved.		
Trigger		Agent logs in for the first time after verification.		
Step ID	Actor	Action	Business Rules	Notes & References

RS - 1	System	Displays available subscription tiers (e.g., Free, Starter, Growth, Enterprise) with feature comparison.		
RS - 2	Agent	Selects a plan.		
RS - 3	Agent	Proceeds to make payments for the plan if it is a paid plan		
RS - 4	Agent	Sets base currency, operating country, tax/VAT registration.		
RS - 5	System	Marks onboarding complete and routes agent to the live Agent Console dashboard.		

2.3 Flights and Hotels

UC – 1A: Search & Book a Flight via Trips Africa API

Title		Search & Book a Flight via Trips Africa API		
Description		This use case describes how an agent searches for and books a flight.		
Actors		Agent		
Preconditions		Agent's Trips Africa API credentials are active; agent has sufficient wallet balance.		
Postconditions		Flight is ticketed and a booking record with e-ticket reference exists.		
Trigger		User initiates a flight search from the Agent Console		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	User	Enters origin, destination, travel dates, and passenger count.		
RS - 2	System	Calls the Trips Africa API and returns available fares with the Agents markup	Results returned within 5 seconds for 95% of queries. If the API times out or errors, system displays a clear "try again" message rather than a blank result.	
RS - 3	User	Filters/sorts results and selects a fare.		
RS - 4	System	Re-validates price and availability with Trips Africa immediately before booking.	If price/availability has changed, user must reconfirm before proceeding.	
RS - 5	System	On payment confirmation, calls the Trips Africa booking/ticketing endpoint.	Sell price to customer = Trips Africa net fare + agent markup + applicable taxes.	
RS - 6	System	Receives the e-ticket/confirmation from Trips Africa and generates the branded booking voucher.		

UC – 1B: Search & Book a Hotel via Trips Africa API

Title		Search & Book a Hotel via Trips Africa API		
Description		This use case describes how an agent or customer searches for and books hotel accommodation.		
Actors		Agent		
Preconditions		Agent's Trips Africa API credentials are active; agent has sufficient wallet balance.		
Postconditions		Flight is ticketed and a booking record with e-ticket reference exists.		
Trigger		User initiates a hotel search from the Agent Console		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	User	Enters destination, check-in/check-out dates, room and guest count.		
RS - 2	System	Calls the Trips Africa API and returns available properties and rates.		
RS - 3	User	Filters by price, star rating, board basis and cancellation policy, and selects a rate.	Cancellation deadline and refundability must be clearly shown before selection.	
RS - 4	System	Re-validates rate and availability with Trips Africa before confirming.		
RS - 5	Agent	Applies markup and adds to the customer's invoice.		
RS - 6	System	On payment confirmation, calls the Trips Africa booking endpoint and receives a confirmation reference.		

2.4 Checkout & Booking Engine

UC – 1A: Customer Checkout & Payment

Title		Customer Checkout & Payment		
Description		This use case describes how a customer completes payment for one or more items in their cart.		
Actors		Customer, Agent (assisted checkout)		
Preconditions		Cart contains at least one bookable item (tour, visa, group tour spot, flight, or hotel).		
Postconditions		Payment is captured, each cart item's order status becomes Confirmed, and documents are generated.		
Trigger		Customer clicks "Checkout" from the cart, or an agent completes a sale on the customer's behalf.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Customer	Reviews cart items and total price, and proceeds to checkout.		
RS - 2	Customer	Chooses to check out as guest		

RS - 3	Customer	Selects a payment method and currency.	Available gateways depend on the agent's operating country.	
RS - 4	System	Processes payment through the selected gateway.	Card data is tokenized via a PCI-DSS-compliant gateway; raw card data is never stored by the Platform.	
RS - 5	System	On success, confirms each order line (calling the Trips Africa API for flight/hotel) and updates status to Confirmed.	If any flight/hotel component fails to confirm with Trips Africa after payment, the affected line is flagged for agent resolution and the customer is notified.	
RS - 6	System	Generates booking confirmation		
RS - 7	System	On failure, displays the decline reason and returns the customer to payment selection without losing cart contents.		

2.5 Payments & Wallet

UC – 1A: Agent Tops Up Wallet

Title		Agent Tops Up Wallet		
Description		This use case describes how an agent funds their wallet on Trips		
Actors		Agent		
Preconditions		Agent account is Verified.		
Postconditions		Agent's wallet balance is increased by the funded amount.		
Trigger		Agent clicks "Top Up Wallet" in the Agent Console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Enters top-up amount and selects a payment method.		
RS - 2	System	Processes payment via the selected gateway.		
RS - 3	System	Credits the agent's wallet and records the transaction in the ledger.		
RS - 4	System	Sends a receipt/confirmation to the agent.		

2.6 Pricing, Markup Engine

UC – 1A: Agent Configures Markup & Commission Rules

Title	Agent Configures Markup Rules
--------------	-------------------------------

Description		This use case describes how an agent sets pricing rules applied automatically across their catalog and Trips Africa content.		
Actors		Agent		
Preconditions		Agent account is active.		
Postconditions		Markup rules are saved and applied to future searches, quotes and bookings.		
Trigger		Agent opens "Pricing Rules" in the Agent Console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Sets a default global markup (percentage or fixed amount).		
RS - 2	Agent	Can Override the default markup for specific product types (flights, hotels, tours, visas) or individual products.		
RS - 3	System	Applies the applicable rule automatically at search, quote, and checkout, and displays margin to authorized users only.		

2.7 Sub-Agent & Agency Hierarchy Management

UC – 1A: Principal Agent Creates a Sub-Agent

Title		Principal Agent Creates a Sub-Agent		
Description		This use case describes how an agency owner onboards a sub-agent under their own brand.		
Actors		Agency Owner, Sub-Agent		
Preconditions		Agency Owner account is active and on a plan that permits sub-agents.		
Postconditions		Sub-agent has a scoped login and can transact under the principal agent's brand, wallet, and permissions.		
Trigger		Agency Owner clicks "Add Sub-Agent" in the Agent Console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agency Owner	Enters the sub-agent's name, email/phone, and sends an invitation.		
RS - 2	Sub-Agent	Accepts the invitation and sets a password.		
RS - 3	Agency Owner	Assigns permissions (which product types/suppliers the sub-agent may sell, and price/margin visibility).		
RS - 4	Agency Owner	Sets a wallet allowance for the sub-agent.		
RS - 5	System	Activates the sub-agent account, scoped entirely within the principal agent's brand.	Sub-agents and their customers never see the Trips brand or the principal agents.	

RS - 6	Agency Owner	Can adjust, freeze, or revoke the sub-agent's access at any time.		
--------	--------------	---	--	--

2.8 CRM & Customer Management

UC – 1A: Agent Manages a Customer Profile

Title		Agent Manages a Customer Profile		
Description		This use case describes how an agent tracks a customer relationship from inquiry to repeat business.		
Actors		Agent		
Preconditions		A customer has made an inquiry, quote request, or booking.		
Postconditions		Customer profile reflects the latest interaction and any scheduled follow-up.		
Trigger		Agent opens a customer record from the CRM or receives a new inquiry.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	System	Creates or updates the customer profile automatically from an inquiry, quote, or booking.		
RS - 2	Agent	Reviews contact info, booking history, documents and past communications in one profile.		
RS - 3	Agent	Sets a follow-up task/reminder against the customer or quote.		
RS - 4	System	Surfaces the customer in the sales pipeline view (New, Quoted, Negotiating, Won, Lost) and alerts the agent when a follow-up is due.		

2.9 Document Generation (Invoices)

UC – 1A: System Generates a Booking Invoice

Title		System Generates a Booking & Invoice		
Description		This use case describes how branded customer-facing documents are produced at key points before or after the booking lifecycle.		
Actors		System, Agent, Customer		
Preconditions		A booking exists with a Confirmed status and payment has been recorded or not		
Postconditions		Invoice documents exist, are branded to the agent, and are accessible to agent and customer.		
Trigger		An order line reaches Confirmed status		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	System	Selects the correct document template for		

		the product type (flight, hotel, tour, visa, group tour).		
RS - 2	System	Populates the template with the agent's logo, colors and contact details using the agents branding.		
RS - 3	System	Renders the document in the customer's currency/language where applicable.		
RS - 4	System	Makes the document available for download to both agent and customer, and emails a copy to the customer		
RS - 5	Agent	Can reprint or reissue the document on demand.		

2.10 Customer-Facing Website

UC – 1A: Customer Browses Agent's Website

Title		Customer Browses Agent Website		
Description		This use case describes how a traveler interacts with an agent's branded website when they want a personalized trip rather than a fixed listing or anything els		
Actors		Customer, Agent		
Preconditions		Agent's website is live.		
Postconditions		A new inquiry/lead is created in the agent's CRM inbox and pipeline.		
Trigger		Customer visits the agent's website		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Customer	Browses tours, visas and group departures by destination, category and date on the Agent's website		
RS - 2	Customer	Opens the trip-request widget and submits destination, dates, budget and preferences.		
RS - 3	System	Creates a lead in the agent's CRM inbox (see CRM-1) and confirms receipt to the customer.		
RS - 4	Agent	Reviews the request and builds a priced itinerary/quote and send to the potential customer		
RS - 5	Customer	Receives details via email		

2.11 Branded Website Website

UC – 1A: Build & Publish Branded Website

Title		Build & Publish Branded Website		
Description		This use case describes how an agent customizes and publishes their own branded website.		
Actors		Agent		
Preconditions		Agent has completed registration and onboarding.		
Postconditions		Agent's website is live and publicly accessible on a subdomain or custom domain.		
Trigger		Agent selects "Website" from the Agent Console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Selects a website template from the template library.		
RS - 2	Agent	Uploads logo and brand colors, and edits homepage content and page copy (About, Contact, Terms).		
RS - 3	Agent	Chooses a free subdomain (agency.tripsagent.com) or connects a custom domain.	Custom domain requires DNS verification (TXT/CNAME record) before SSL is issued.	
RS - 4	System	Provisions SSL for the chosen domain.		
RS - 5	Agent	Previews the website in staging mode.		
RS - 6	Agent	Clicks "Publish."	Website cannot be published until at least one product (tour, visa, or group tour) is in Published state.	
RS - 7	System	Makes the website publicly live and confirms the URL to the agent.		

2.12 Product Catalog: Tours, Packages & Activities

UC – 1A: Agent Creates a Tour/Package Listing

Title		Agent Creates a Tour/Package Listing		
Description		This use case describes how an agent creates a sellable tour or package on their website.		
Actors		Agent		
Preconditions		Agent is logged in and has an active website.		
Postconditions		Tour listing is saved as Draft or Published and, if published, visible on the website.		
Trigger		Agent clicks "Add Tour/Package" in the catalog section of the Agent Console.		

Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Enters title, description, destination, duration, and uploads images.		
RS - 2	Agent	Builds the day-by-day itinerary and lists inclusions/exclusions.		
RS - 3	Agent	Sets pricing (base price, variants by room type/group size, child/infant pricing) and available departure dates.		
RS - 4	Agent	Sets inventory capacity per departure date.	System must prevent bookings from exceeding capacity.	
RS - 5	Agent	Tags the listing by category and theme for storefront filtering.		
RS - 6	Agent	Saves as Draft or clicks "Publish."	Published listings must have at minimum a title, price, one image, and one available date to pass validation.	
RS - 7	System	Publishes the listing to the agent's website and makes it bookable.		

2.13 Group Tours Module

UC – 1A: Agent Creates a Group Tour

Title		Agent Creates a Group Tour		
Description		This use case describes how an agent sets up a fixed-date group departure.		
Actors		Agent		
Preconditions		Agent has an existing tour/package or creates a new one to attach the departure to.		
Postconditions		A bookable group departure with defined capacity and pricing exists on the website.		
Trigger		Agent clicks "Add Group Departure" on a tour listing.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Sets departure date, minimum and maximum group size.		
RS - 2	Agent	Sets tiered pricing per pax count (optional).		
RS - 3	Agent	Sets deposit amount and installment schedule.		
RS - 4	System	Publishes the departure with status "Open."		
RS - 5	System	Auto-updates status to "Guaranteed to Run" once minimum pax is		

		reached, and "Nearly Full"/"Sold Out" near or at capacity.		
RS - 6	System	Once Sold Out, routes further interest to a waitlist.		

UC – 1B: Customer Reserves a Tour/Group Tour Spot

Title		Customer Reserves a Group Tour Spot		
Description		This use case describes how a customer joins a group departure with a deposit.		
Actors		Customer		
Preconditions		Group departure is Open or Nearly Full, with available capacity.		
Postconditions		Customer's spot is reserved; balance payment is scheduled per the installment plan.		
Trigger		Customer clicks "Reserve Spot" on a group departure listing.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Customer	Selects number of travelers and enters traveler details.		
RS - 2	System	Checks remaining capacity.	If insufficient capacity remains, customer is offered the waitlist instead.	
RS - 3	Customer	Pays the required deposit at checkout.		
RS - 4	System	Confirms the reservation, deducts capacity, and adds traveler(s) to the rooming/pax manifest.		
RS - 5	System	Schedules and sends reminders for remaining installment payments per the plan.		

2.14 Reporting & Analytics

UC – 1A: Agent Views Sales & Performance Dashboard

Title		Agent Views Sales & Performance Dashboard		
Description		This use case describes how an agent monitors business performance.		
Actors		Agency Owner, Agent		
Preconditions		Agent has at least one recorded booking.		
Postconditions		Agent has an up-to-date view of sales, revenue and margin.		
Trigger		Agent opens "Reports" in the Agent Console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Agent	Selects a date range and optional filters (product type, sub-agent).		
RS - 2	System	Displays bookings, revenue, and margin for the selected criteria.		

RS - 3	Agent	Drills into a specific sub-agent's performance.		
RS - 4	Agent	Exports a financial statement for accounting/tax purposes.		

2.15 Trips Admin / Back-Office Console

UC – 1A: Agent Views Sales & Performance Dashboard

Title		Trips Admin Verifies or Suspends an Agent Account		
Description		This use case describes Trips Admin oversight of agent accounts.		
Actors		Trips Admin		
Preconditions		An agent account exists (Pending Verification, Verified, or flagged for review).		
Postconditions		Agent account status is updated and, where relevant, the agent is notified.		
Trigger				
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Trips Admin	Opens the agent's account record, including KYC documents and activity history.		
RS - 2	Trips Admin	Approves verification, or suspends/terminates the account for a policy violation.		
RS - 3	System	Updates account status; if suspended, the website is taken offline and new bookings are blocked.		
RS - 4	System	Notifies the agent of the decision and, on termination, provides a data export.		
RS - 5	System	Logs the action with actor, timestamp, and before/after state.		

UC – 1B: Platform Admin Views the Back-Office Dashboard

Title		Trips Admin Views the Back-Office Dashboard		
Description		This use case describes the at-a-glance operational overview an admin		
Actors		Trips Admin		
Preconditions		Admin has an active back-office account with dashboard access.		
Postconditions		Admin has a current snapshot of platform-wide activity and can navigate easily		
Trigger		Admin logs into the back-office console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	System	Displays headline metrics: total active agents, new sign-ups,	Default period is "Today" with quick	

		GMV, bookings, and pending-verification count for the selected period.	toggles for 7/30/90 days. Metrics refresh at least every 10 minutes.	
RS - 2	System	Displays operational alerts requiring action: pending KYC reviews, payment gateway errors, and disputes awaiting response.		
RS - 3	System	Displays a mini-leaderboard of top-performing agents by GMV or booking volume for the period.		
RS - 4	Trips Admin	Clicks any widget to drill into the underlying record		

UC – 1C: Trips Admin Runs Platform Reporting & Analytics

Title		Trips Admin Runs Platform Reporting & Analytics		
Description		This use case describes how an admin analyzes platform-wide performance in depth, beyond the summary dashboard, and exports data for internal reporting.		
Actors		Trips Admin		
Preconditions		Trips Agent Platform has recorded agent, booking, and transaction activity.		
Postconditions		Admin obtains the requested report on-screen and/or as an export.		
Trigger		Admin opens "Reports & Analytics" in the back-office console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Trips Admin	Selects a report type: GMV & revenue, agent growth/churn, subscription plan mix, Trips Africa API performance (search-to-book conversion, error rate), or product-type breakdown (flights, hotels, tours, visas, group tours).		
RS - 2	Trips Admin	Sets filters: date range, agent/agency, country, subscription tier, product type.		
RS - 3	System	Generates the report as a table and chart view.	Reports covering more than 90 days or all tenants run as an asynchronous job and notify the admin when ready.	
RS - 4	Trips Admin	Drills from an aggregate figure into the underlying agent-level or transaction-level records.		

RS - 5	Trips Admin	Exports the report (CSV/XLSX) or schedules it to recur and be emailed to a distribution list.		
RS - 6	System	Logs every export with the admin user, timestamp, and report scope, given the sensitivity of cross-tenant data.		

UC – 1D: Trips Admin Manages an Agent Profile

Title		Trips Admin Manages an Agent Profile		
Description		This use case describes how an admin views and edits a specific agent's account and business details from the back office, beyond the verify/suspend decision covered.		
Actors		Trips Admin		
Preconditions		Agent account exists on the Platform.		
Postconditions		Agent profile reflects the admin's changes; the agent is notified of any change that affects their access or billing.		
Trigger		Admin searches for and opens an agent record from the list.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Trips Admin	Searches/filters the list by agent name, country, subscription tier, or status.		
RS - 2	Trips Admin	Opens the agent profile, viewing business details, KYC documents, website domain(s), subscription plan and billing history, wallet balance, sub-agent list, and activity log.		
RS - 3	Trips Admin	Edits editable fields (e.g., business details, assigned account manager, notes) or corrects data on the agent's behalf at their request.	Changes to legal/business identity fields require an attached reason and are logged for audit.	

UC – 1E: Trips Admin Creates & Configures a Subscription Tier

Title		Trips Admin Creates & Configures a Subscription Tier		
Description		This use case describes how an admin defines the subscription plans (e.g., Free, Starter, Growth, Enterprise) that agents choose from during onboarding		
Actors		Trips Admin		
Preconditions		Admin has permission to manage billing/plan configuration.		
Postconditions		The subscription tier is available (or updated) for agents to select or be migrated onto.		

Trigger		Admin opens "Subscription Tiers" in the back-office console.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Trips Admin	Creates a new tier or opens an existing one, naming it and writing a customer-facing description.		
RS - 2	Trips Admin	Sets pricing: billing amount, currency, and interval (monthly/annual).		
RS - 3	Trips Admin	Sets feature entitlements for the tier: number of sub-agents allowed, storefront/custom-domain access, transaction fee percentage on Trips Africa bookings, catalog listing limits, and access to advanced features (e.g., loyalty program, API access).		
RS - 4	Trips Admin	Sets trial length and any promotional pricing for the tier.		
RS - 5	Trips Admin	Publishes the tier so it appears in the onboarding.	A tier cannot be deleted while agents are actively subscribed to it; it can be archived to block new sign-ups instead.	
RS - 6	Trips Admin	Edits an existing tier's pricing.	Changes to an existing tier apply to new subscribers immediately; the admin chooses whether existing subscribers are migrated, with advance notice to affected agents.	
RS - 7	System	Logs all tier changes with actor and timestamp, and notifies affected agents of any pricing or entitlement change to their current plan.		

UC – 1F: Trips Platform Admin Adds an Internal Trips User to the Back Office

Title	Trips Admin Adds an Internal Trips User to the Back Office
Description	This use case describes how an admin provisions access to the back-office console for another member of the Trips Africa/Trips operations team (e.g., support, finance, content moderation).
Actors	Trips Admin (Super Admin)

Preconditions		Requesting admin has user-management permission within the back office.		
Postconditions		The new internal user has a back-office login scoped to their assigned role.		
Trigger		Admin clicks "Add User" under back-office User Management.		
Step ID	Actor	Action	Business Rules	Notes & References
RS - 1	Trips Admin	Enters the new internal user's name, work email, and department.		
RS - 2	Trips Admin	Assigns a back-office role (e.g., Super Admin, Support, Operations, Finance/Billing)	Each role maps to a predefined permission set (e.g., Finance sees billing/payouts but not KYC documents; Support sees agents records and disputes, subscription-tier configuration). Only Super Admins can create or edit other back-office user accounts.	
RS - 3	System	Sends an invitation email to the new user with a link to set their password.		
RS - 4	New Trips User	Accepts the invitation, sets a password		
RS - 5	System	Activates the account, scoped strictly to the assigned role's permissions.		
RS - 6	Trips Admin	Can edit the user's role, deactivate, or remove their access at any time (e.g., on offboarding).		
RS - 7	System	Logs account creation, role assignment, and any subsequent access changes with actor and timestamp.
